Metalloid Wikipedia

February 19th, 2019 - A metalloid is a type of chemical element which has properties in between or that are a mixture of those of metals and nonmetals There is neither a standard definition of a metalloid nor complete agreement on the elements appropriately classified as such Despite the lack of specificity the term remains in use in the literature of chemistry The six commonly recognised metalloids are boron

Leave a question Dr Joaquin Barroso s Blog

January 30th, 2019 - Hi Harish Wow your question is not a short one Basically Gaussian uses the Berny Optimization algorithm which calculates all forces on every atom i e which way and how strongly is each atom being pushed or pulled by the rest of the atoms then it also calculates the gradient of such forces and allows them to be pushed or pulled just a little bit and repeats the operation until the
